

INVIGORATE

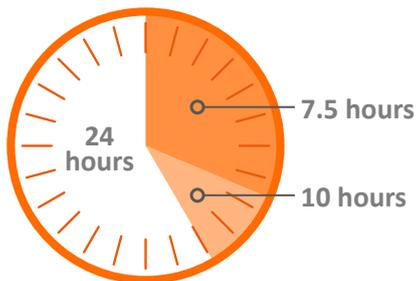

Performance footwear for the catering trade

Did you know?

Chefs work an average of
10 hours a day

75% of that time
is on their feet

In 2014/15, over 20,000 slips and trips were reported in kitchens, thanks to a high risk of wet and greasy floors.

Your feet contain around **250,000 sweat glands**. It's no wonder feet can **sweat up to an egg cup a day** – especially in a hot kitchen!

» Despite their strength and durability, WearerTech shoes are light enough to float!

Each foot contains
26 BONES,
33 JOINTS,
AND OVER 100
muscles, ligaments
and tendons

Shoes that take the pressure off your hardworking feet

It's our mission to understand the chefs and kitchen workers who wear our shoes. And because we recognise the strain your body is under every working day, we have one goal in mind – to take the pressure off those hardworking feet of yours.

What makes our shoes so special is the care and research that goes into developing them. Every element is carefully designed, refined, tested and improved – with help from the people who wear them. People just like you.

As well as the science you might expect us to use in our product development, every feature of every shoe is tested in the hot, pressurised kitchen environments you work in.

The feedback we get from real-life chefs and cooks helps us understand the pressures you're under from being on your feet, day in, day out – and make our shoes better for you as a result.

We call this insight WearerTech.

The WearerTech difference

You spend your life on your feet – standing, walking, working. You know how your body feels at the end of a long day in a hot kitchen. Tired, sore, stiff.

WearerTech footwear is designed to improve your working day... helping you finish a long shift with fresh feet.

While they might look like other brands, our shoes are different. Since 1978, we've developed supportive, affordable, comfortable shoes, engineered for you.

When you choose WearerTech, you know you're getting footwear that's been designed with you in mind.

Comfort for your sole... and your whole body

Ergonomic footbed

Reduces strain on the muscles and helps improve your posture

Adjustable strap

Heel strap securely holds your foot, while making them quick and easy to slip on and off

Shock-absorbing material

Reduces the impact and strain of every step

Large toe box

Allows toes to sit naturally and comfortably within the shoe

Supportive foot shape

Cleverly designed footbed to ease the pressure of long periods of standing

Side vents

Vents specifically shaped and angled to prevent liquids entering the shoe

Slip-resistant sole

Cutting-edge, slip-resistant SSR technology and puncture-resistant sole to reduce accidents

The Invigorate range

Like all WearerTech shoes, **Invigorate** is cleverly designed to provide the optimum level of comfort and support for your feet, to relieve the pressure and fatigue your body feels after a long shift.

Invigorate: the benefits

No trips, no slips

Invigorate shoes are equipped with world-leading, cutting-edge, slip-resistant SSR soles to help reduce accidents at work. These super protective soles are also puncture resistant – minimises the risk from broken glass or sharp hazards.

Comfort and support

Invigorate has been carefully developed to provide optimum comfort and support. They're made from a clever shock-absorbing material called E-Tech, which moulds to the shape of your feet over time for unbeatable comfort and fit.

Fewer aches and pains

The heel height of all WearerTech shoes is designed to reduce strain and impact on your joints and muscles caused by hours of standing – helping to reduce back and knee pain.

Stay cool and dry

Invigorate incorporates a heel strap to securely hold your foot, while making them quick and easy to slip on and off. Their open back helps to keep your feet cool by allowing the air to flow freely around them, while directional air vents prevent liquids and spills from entering the shoe.

Clean up

Either wipe your **Invigorate** clean or stick them in your washing machine after a busy shift.
